

Meridian Robotics — IT Troubleshooting Guide

Owner: IT Service Desk. Version 2026.1. SLA targets are listed per category.

Service Levels (SLA)

Priority	Description	First response	Resolution target
-----	-----	-----	-----
P1	Outage blocking >25 users or production	15 min	4 hours
P2	Single user fully blocked	1 hour	1 business day
P3	Degraded / workaround exists	4 hours	3 business days
P4	Request / how-to	1 business day	5 business days

1. VPN Connection Issues

Symptoms: "Authentication failed" or client hangs at "Connecting..."

1. Confirm MFA token is current; tokens expire every 30 seconds.
2. Verify you are on a supported client version (≥ 7.2). Older clients fail silently after the 2026-01 gateway upgrade.
3. Flush DNS: ``sudo dscacheutil -flushcache`` (macOS) and reconnect.
4. If error code ``VPN-503`` appears, the regional gateway is saturated — switch to the secondary gateway in the client dropdown.
5. Still failing after 10 minutes: open a P2 ticket (``create_ticket``, category ``network``).

2. Password Reset / Account Lockout

- Accounts lock after 6 failed attempts for 15 minutes.
- Self-service reset is available via the People Ops tool (``reset_password``).
- A reset invalidates all active sessions; you must re-enroll MFA if the device was wiped.
- Repeated lockouts (3+ in a day) usually indicate a stale saved credential on a phone mail client — remove and re-add the account.

3. Laptop Provisioning for New Hires

- IT ships a pre-imaged laptop to arrive on or before the start date.
- Day-1 setup: connect to corporate Wi-Fi ``MeridianCorp``, sign in with the temporary password from the welcome email, then complete MFA enrollment.

- Full-disk encryption and endpoint protection are pre-installed; do not disable.
- Software requests beyond the standard image go through `create\_ticket` (category `software`, priority P4).

4. Common Error Codes

Code	Meaning	Fix
-----	-----	-----
VPN-503	Gateway saturated	Switch to secondary gateway
AUTH-119	Expired MFA enrollment	Re-enroll MFA in the identity portal
MAIL-42	Mailbox over quota	Archive or request quota increase (P4)
REPO-401	Git credential expired	Regenerate token; tokens last 90 days
PRINT-7	Printer offline	Power-cycle; if persists, P3 ticket

5. Escalation Matrix

- Tier 1 (Service Desk) handles P3/P4 and triages everything.
- Tier 2 (Systems) handles P2 network/identity issues.
- Tier 3 (Infrastructure on-call) handles P1 outages and `security\_incident`.
- Anything tagged `security\_incident` is auto-escalated to Tier 3 with a 1-hour SLA.

6. How the Service Desk Agent Should Behave

- Always classify the request priority (P1–P4) before acting.
- For known issues, provide the documented fix first, then offer to open a ticket.
- Never reset a password or create a ticket without confirming the employee's identity via the `lookup\_employee` tool.
